

Dungeness Watershed Action Plan Conference Call Notes, September 12, 2011

Participants (7): John Woolley, Mike Anderson, Susan Piper, Ross Krumpe, Kathleen Dowd-Gailey, Rebecca Wolfe, Tim McNulty

DRMT Meeting

- The watershed action plan will be on the agenda of this month's meeting of the Dungeness River Management Team on September 14. Susan and Scott Haggerty will review the status of the action plan. Dean Yoshina and Mike will discuss the potential involvement of the DRMT in plan development and implementation. John, Rebecca, and Ross are also planning to attend.

October Workshop

- Susan said that the Forest Service planning team would be able to have an action plan workshop with interested members of the collaborative group and DRMT on either Friday, October 14, or Monday, October 17. Mike will see if there is a preference for either date among members of the DRMT and the collaborative group.
[Update: since the Tribal conference room is not available on Oct. 14, the workshop date will be **October 17**].
- The Jamestown S'Klallam Tribe's conference room is available for the workshop. If more than 30 people are expected to attend, the workshop could be moved to the Guy Cole Convention Center.
- The Forest Service will provide a final spreadsheet with project descriptions, staff rankings, and estimated costs a couple of weeks before the workshop.
- Maps will be provided at the workshop, along with background information about the Forest Service's watershed condition framework process. Project information and discussion will likely be organized by resource area.

Planning Update

- Several additional proposals were submitted before the August 30 deadline – e.g. Tyler Peak access, snag creation, mountain biking trails, and horse riding on Road 2860 segments.
- An off-highway vehicle loop route is being considered on Road 2878-100 in the vicinity of Ned Hill. OHV routes have also been suggested in the Jimmy Come Lately watershed.
- John has field checked the 2878-100 road and found that it was relatively flat ground but thought that it would difficult to connect roads together to make a loop route.

Next conference call of the collaborative working group will be Monday, October 3, at 10:00 AM.
